

Did you know...Patient safety issues in primary care are real.

Annually,

1 in 20

 **outpatients experiences a diagnostic error**

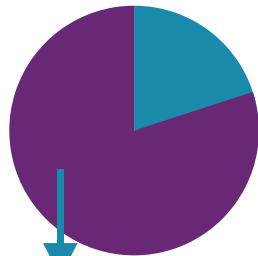

55%

of patients said
diagnostic errors
were a chief concern
in outpatient visits

An estimated
160 million
medication
errors
occur each
year in
primary care

80%

of information shared
in a primary care visit is
immediately forgotten
by patients

1 in 9

ED admissions
are related to an
adverse drug event

Improve patient safety by engaging patients and families.
