Physician and Physician Practice Research Database

Physician Geographic – Public Use File

Purpose and Contents of the Codebook

The geographic Physician Public Use File provides summarized information and characteristics for physicians within the state that have a license. Physician information has been summarized at the 3-digit ZIP Code. This codebook provides a list of available data elements and their characteristics, some as originally obtained from the administrative/other available data sources and others as generated/enhanced by AHRQ. Because data contained in the Physician and Physician Practice Research Database are drawn from multiple data sources, variables may have differing availability and patterns of missingness across states. The codebook includes a variable label, variable name, input data source, variable type and length, and state-specific information.
